Smart Parking Platform – Project Management Plan

Part 8: RISK MANAGEMENT & COMPLIANCE STRATEGY

Risk Identification & Probability Impact Matrix

Risk Event	Category	Probability	Impact	Severity Level
Third-Party Mapping API Downtime	Technical	Medium	High	High
Payment Gateway Security Vulnerability	Security / Compliance	Low	Critical	High
Non-Compliance with City Parking Ordinances	Regulatory	Medium	High	Medium-High
Scope Creep or Integration Bottlenecks	Operational	High	Medium	Medium

Regulatory Compliance Strategy

- **PCI-DSS Compliance:** All credit card processing and financial transactions strictly comply with Payment Card Industry Data Security Standards through secure API tokenization.
- **GDPR & Privacy Laws:** User personal data, location tracking logs, and account details are encrypted both in transit and at rest, supporting explicit user consent and right-to-deletion protocols.
- **City Ordinances:** Developed in alignment with local municipal regulations regarding urban curb management, traffic flow policies, and digital permit verifications

Incident Response & Contingency Planning

- **Incident Response Team (IRT):** The QA and Backend engineering leads act as the primary response unit for live-system troubleshooting.
- **Rollback Protocol:** Automated CI/CD pipelines support instant rollbacks to stable previous builds if a deployment introduces critical bugs or API failures.
